

FOLLEI

Autonomous Business Workforce Platform

Internal Product Proposal

Version 1.0

Executive Summary

Follei is an AI-powered Autonomous Business Workforce Platform that learns an organization's business, products, services, customers, processes, and knowledge base, then deploys AI workers across Sales, Support, Customer Success, Collections, Renewals, and Operations.

Unlike traditional CRMs, sales automation tools, or AI chatbots, Follei acts as a digital workforce capable of understanding the business context and autonomously performing customer-facing and revenue-generating activities.

The platform is designed for businesses of all sizes and industries including:

- Educational Institutions
- SaaS Companies
- Manufacturing Companies
- Healthcare Organizations
- Real Estate Firms
- Recruitment Agencies
- Retail Businesses
- Consulting Firms
- Financial Services
- Enterprises

The long-term vision is to create a system where a company can connect its business assets and immediately deploy AI employees that operate 24/7.

Problem Statement

Businesses currently use multiple disconnected systems:

- CRM
- WhatsApp
- Email
- Phone
- ERP
- LMS
- Ticketing Systems

- Knowledge Bases
- Spreadsheets

Employees spend significant time on:

- Following up leads
- Answering repetitive questions
- Scheduling meetings
- Sending reminders
- Chasing payments
- Customer onboarding
- Support ticket handling

Existing AI solutions focus on isolated use cases.

Examples:

- AI SDR
- AI Chatbot
- AI Support Agent
- CRM Automation

No platform provides an end-to-end autonomous workforce.

Follei aims to solve this.

Product Vision

Connect your business.

Follei learns your business.

Follei deploys AI workers.

Follei continuously improves itself through interactions.

Core Platform Philosophy

Traditional Systems:

Data → Human → Action

Follei:

Data → Understanding → Decision → Action → Learning

The key differentiator is that Follei does not simply automate workflows.

Follei understands context and makes decisions.

High-Level Architecture

The platform consists of six major systems:

1. Business Intelligence System
 2. Knowledge System
 3. Revenue Intelligence System
 4. Customer Intelligence System
 5. AI Workforce System
 6. Learning System
-

SYSTEM 1

Business Intelligence System

Objective

Understand the company.

Before Follei can sell, support, or engage customers, it must learn the business.

Connected Sources

Knowledge Sources

- Website
- PDFs
- Brochures
- Product Catalogs
- SOPs
- Sales Decks
- Pricing Sheets

Internal Sources

- Google Drive
- Microsoft OneDrive
- SharePoint
- Notion
- Confluence

Communication Sources

- Gmail
- Outlook
- WhatsApp
- Teams
- Slack

Business Systems

- CRM
 - ERP
 - LMS
 - Accounting Software
 - Ticketing Platforms
-

AI Processing

Follei automatically extracts:

Products

Services

Pricing

Plans

Policies

FAQs

Competitors

Customer Segments

Sales Processes

Support Processes

Payment Processes

Output

Business Knowledge Graph

This becomes the organization's digital brain.

SYSTEM 2

Knowledge System

Objective

Provide accurate business context to all AI workers.

Knowledge Layer 1

Structured Knowledge Store

Stores:

- Products
 - Services
 - Pricing
 - Policies
 - Plans
 - SLAs
-

Knowledge Layer 2

Vector Database

Stores:

- Documents
- Emails
- PDFs
- Call Transcripts
- Knowledge Articles

Purpose:

Semantic retrieval.

Knowledge Layer 3

Business Knowledge Graph

Stores relationships.

Example:

Product → Feature

Feature → Benefit

Benefit → Customer Segment

Customer Segment → Objections

Objections → Responses

Knowledge Layer 4

Memory System

Long-Term Memory

Company knowledge.

Mid-Term Memory

Customer history.

Short-Term Memory

Active conversation context.

SYSTEM 3

Revenue Intelligence System

Objective

Measure customer purchase probability.

Lead Intelligence Engine

Calculates:

ICP Score

Intent Score

Engagement Score

Qualification Score

Buying Signal Score

Relationship Score

Qualification Framework Engine

Supports:

BANT

Budget Authority Need Timeline

MEDDIC

Metrics Economic Buyer Decision Criteria Decision Process Identify Pain Champion

SPIN

CHAMP

ANUM

Custom Frameworks

Industry-specific frameworks can be created.

Revenue Probability Engine

Predicts:

Probability of conversion.

Uses:

- Historical deals
- Behavioral data
- Intent signals
- Qualification data

Output:

SYSTEM 4

Customer Intelligence System

Objective

Manage customer lifecycle after conversion.

Customer Health Engine

Measures:

- Product Adoption
 - Feature Usage
 - Engagement
 - Satisfaction
-

Churn Prediction Engine

Detects:

- Usage decline
- Support escalation
- Payment delays
- Negative sentiment

Outputs:

Churn Risk Score

Expansion Engine

Detects:

- Upsell opportunities
- Cross-sell opportunities
- Renewal opportunities

Outputs:

Expansion Probability Score

SYSTEM 5

AI Workforce System

This is the execution layer.

SDR Worker

Responsibilities:

- Lead qualification
- Lead nurturing
- Discovery conversations
- Meeting booking

Channels:

- Voice
 - WhatsApp
 - Email
-

Sales Executive Worker

Responsibilities:

- Product explanation
 - Objection handling
 - Proposal generation
 - Deal progression
-

Customer Success Worker

Responsibilities:

- Onboarding
 - Adoption
 - Customer engagement
 - Renewal preparation
-

Support Worker

Responsibilities:

- Customer support
 - FAQ handling
 - Ticket resolution
 - Escalation management
-

Collections Worker

Responsibilities:

- Payment reminders
 - Invoice follow-up
 - Collection calls
 - Renewal reminders
-

Account Manager Worker

Responsibilities:

- Relationship management
 - Expansion opportunities
 - Executive communication
-

Executive Insights Worker

Responsibilities:

Provide leadership dashboards and recommendations.

Example:

Revenue forecast reduced by 12%.

Reason:

Increase in stalled opportunities.

Recommendation:

Executive intervention required.

SYSTEM 6

Learning System

Objective

Continuously improve platform performance.

North Star Metric

Revenue Influence Score

Measures total revenue directly influenced by Follei across:

- Sales
- Support
- Renewals
- Collections
- Upsells

The ultimate goal is not automation.

The ultimate goal is autonomous business growth.
